

## Dynaudio Focus XD Firmware Update Instructions

### Requirements:

- Empty USB stick, formatted to FAT32 (Bootable)
  - The latest firmware file downloaded from <http://www.dynaudio.com/support/firmware>
1. Unzip the downloaded Zip file. Please note: on some operating systems this is done automatically – you should end up with a file similar to 200D305.bin
  2. Copy the .bin file onto the USB stick
  3. Switch OFF the loudspeaker with the rear panel switch
  4. If you have a Hub or Connect, switch this off as well (remove power connection)
  5. Insert the USB stick into the USB port at the rear panel labelled Service
  6. Switch ON the loudspeaker with the rear panel switch
  7. The loudspeaker will automatically upload the firmware from the USB stick
  8. Important: After this, allow the speaker to install the full update during the next 5-7 minutes. **DO NOT POWER OFF THE SPEAKERS**
  9. During this update, the white LED's will blink, filling up from the bottom twice – first time is quick, second is slow.
  10. Firmware update procedure is now finished, and the USB stick can be removed. Please note: **The firmware update must be performed on both speakers!**
  11. After firmware update is completed, power off both speakers with the switch on the rear panel
  12. If you have a Hub or Connect, switch this on first
  13. Now power on the speakers. The speaker will start up with Direct In as the selected input.
  14. Note that if using a Hub or Connect, you may need to re-select the Channel ID (A/B/C) with the remote control, before a connection is established.
